

Corruption Perceptions at Home and Abroad: Universal Values or Double Standards?

Zoltán Fazekas

(joint work with Michael Mueller, Mogens K Justesen, & Yumi Park)

EIBA, Athens
December 2025

Motivation

The screenshot shows a news article from The Economic Times. The headline is "Brazil's Odebrecht corruption: Walmart to pay \$282 million to settle". The sub-headline is "Fighting Corruption at Siemens". The article is dated March 2012 and is part of a "CASE: HBS CASE COLLECTION". It is written by Paul Hudy and Sandra Peacock. The text discusses the 2006 German investigation into Siemens corruption, mentioning that the company faced corruption head-on. It also notes that Walmart signed a deferred prosecution agreement with US authorities. The article includes a "KEYWORD" section with "White-collar Crime, Crime and Corruption, International Culture, Ethics" and a "CITATION" section with "Hudy, Paul, and Sandra Peacock. "White-Collar Crime at Siemens," Harvard Business School MultimediaVideo Case 113-702, March 2012.

High-impact cases: the tip of the iceberg (Dorrough et al. 2023)

≈ 1 in 4 publicly listed US firms w foreign ops engaged in conduct prosecutable under foreign bribery laws (Karpoff et al. 2012)

Corruption is estimated to destroy as much as 5% of global GDP every year (Castro et al. 2020)

Motivation

The screenshot shows a news article from Reuters. The title is "Fighting Corruption at Siemens". The sub-headline is "Walmart to pay \$282 million to settle". The article is dated March 2012 and is part of the "CASE: HBS CASE COLLECTION". It is written by Paul Hudy and Daniela Petrucci. The abstract discusses the 2006 German investigation into Siemens AG staff, mentioning business representing 60% of Siemens' revenues and operations in Asia, Africa, Europe, the Middle East, and the Americas. It highlights interviews with key Siemens executives and supporting internal materials. The keywords listed are White collar Crime, Cross-cultural Communication, Culture, Ethics. The citation is "Hudy, Paul, and Daniela Petrucci. "Fighting Corruption at Siemens," Harvard Business School MultimediaVideo Case 113-702, March 2012." The text also notes that Walmart will pay more than \$144 million to settle charges by the Securities and Exchange Commission over about \$108 million in related parallel criminal charges by the U.S. Department of Justice, according to a statement from the Justice Department. It also mentions that the Aramco Saudi group signed what has been described as the world's largest bribery deal with US and Saudi authorities, in which it confessed to corruption and paid US \$6.6 billion (US \$4.1 billion) in fines.

The misuse of public office for private gain (corruption) poses serious policy concerns, because:

slows growth (Mauro 1995), distorts how government officials allocate resources (Mironov and Zhuravskaya 2016), and fuels the erosion of civic values (Ajzenman 2021)

Why does it persist?

1. Expected benefits outweigh the expected costs, not only for public officials but also for firms (Becker 1968; Ehrlich 1996)
 - ▶ Weak oversight, selective enforcement, or lenient judicial systems ↪ lower expected costs even when statutory penalties are high (Cheung et al. 2021)
 - ▶ Emphasis on formal sanctions as costs
2. Lack of electoral punishment (Bøttkjær and Justesen 2021)
 - ▶ Politicians control the payouts and assume some risk, because they face the electorate on a regular basis
 - ▶ Emphasis on electoral punishment as costs

What is missing?

However, voters are also consumers, shareholders, and employees ↗ wield considerable influence over corporate behavior (McDonnell and King 2013; Abdulsalam et al. 2024)

- ▶ **Reputational costs** of corporate misconduct generally far outweigh legal penalties (Karpoff et al. 2008)

? How do citizens react to corporate wrongdoing and do these reactions vary systematically?

- ▶ **Provenience** of firm & **location** of the act
- ▶ **Contextual** (**corruption levels**) and **individual** (**globalization attitudes**) **moderators**

Expectations

1. A more severe wrongdoing causes more (-) stakeholder reactions
 - ▶ Based on moral psychology framework (Antonetti and Maklan 2016; Martin 2021; Tomz and Weeks 2020; Grappi et al. 2013): the greater the harm to collective welfare \rightsquigarrow the larger the moral outrage and the readiness to bear private costs to punish

In addition: information

- ▶ Certainty of wrongdoing is crucial for how people assign blame and respond to norm violations (Mohliver 2019)
- ▶ When evidence of guilt is unambiguous \rightsquigarrow more severe moral judgments: a conviction represents a categorical judgment rendered by a legitimate authority, removing much of the informational uncertainty that surrounds accusations (Dewan and Jensen 2020)

Expectations

1. The (-) effect of wrongdoing committed by foreign companies in a stakeholder's home country is (↑) than the (-) effect of wrongdoing committed by domestic companies
 - ▶ Liability of foreignness (Zaheer 1995): foreign firms face inherent disadvantages in host countries
 - ▶ Intergroup bias: preference for the in-group and prejudice against out-groups (Reskin 2000; Zhang 2017)
2. The (-) effect of wrongdoing for domestic companies is (↑) when the acts take place at home in comparison to when the acts take place in a foreign country
 - ▶ Unethical acts committed in one's home ≡ insider “betraying” the in-group ↵ especially high outrage (Choudhury et al. 2024; Cheng-Matsuno and Berliner 2024) ⇔ misdeeds abroad perceived by home stakeholders as less personally threatening (Brügger et al. 2016)

Expectations

Contextual moderator: country corruption

1. Confirmation bias (Rabin and Schrag 1999) can (\uparrow) the effect of out-group prejudice: if the foreign company hails from a country with a reputation for corruption, any allegation of wrongdoing readily confirms the stereotype
2. Rationalization, as imposed by the context (Krause et al. 2016): corrupt in a foreign country with pervasive corruption \rightsquigarrow (\downarrow) surprise and (\downarrow) outrage

Individual moderator: globalization attitudes

- ▶ Those more favorable towards globalization processes and actors promoting them should be more lenient towards foreign firms and towards domestic ones acting abroad (Baker 2005; Wu 2022).
- ▶ **Disclaimer:** early stage results, work-in-progress!

Design

Cross-country study (nationally representative)

- ▶ Brazil, Denmark, Germany, Greece, South Africa (in-person), South Korea, and the United States
- ▶ Total of 18,052 participants
- ▶ Variation in corruption perception index
- ▶ Realistic combinations based on trade and MNE presence

Instrument: conjoint survey experiment embedded in survey

- ▶ Tabular presentation
- ▶ Three comparisons/respondent
- ▶ Two-blocks of outcomes: **firm** and politician punishment

Additionally: pre- and post-experiment corruption and globalization questions

Example conjoint table

	Scenario A	Scenario B
Industry	Food	Food
Company	Danish	Chinese
Where	In Denmark	In Denmark
What	Accused by several newspapers of bribing a mayor for future preferential contracts regarding new local shops and offices	Legally contributed to a mayor's campaign

Main attributes

Act {equal chance, $p = 0.2$ }

- ▶ Legally contributed to a mayor's campaign
- ▶ Accused by several newspapers of offering scholarship to a mayor's child
- ▶ Convicted of offering scholarship to a mayor's child
- ▶ Accused by several newspapers of bribing a mayor for future preferential contracts regarding new local shops and offices
- ▶ Convicted of bribing a mayor for future preferential contracts regarding new local shops and offices

Firm provenience

- ▶ Domestic (respondent's country) with $\{p = 0.5\}$ or two low corruption/two high corruption countries $\{p = 0.125\}$
- ▶ Low corruption examples: Denmark, Germany, USA
- ▶ High corruption examples: Brazil, China, India
- ▶ Some adjustment based on specific case combinations

Main attributes

Act location

- ▶ Home (respondent's country) with $\{p = 0.5\}$
- ▶ or Abroad $\{p = 0.5\}$, however, for Abroad depending on company provenience, differently weighted probability combinations:
 - If firm is **domestic**: equal probability $\{p = 0.25, \text{ within Abroad}\}$ for **low- or high-corruption countries** (two each)
 - If firm is **foreign**: draw with $\{p = 0.75, p = 0.25\}$ from **survey country** or **country of foreign company provenience**, foreign company acting in some form at its own home (Brazilian in Brazil, in a non-Brazil sample)

Industry: control (fixed within comparison)

- ▶ Pharma, Food, IT&C

Outcomes

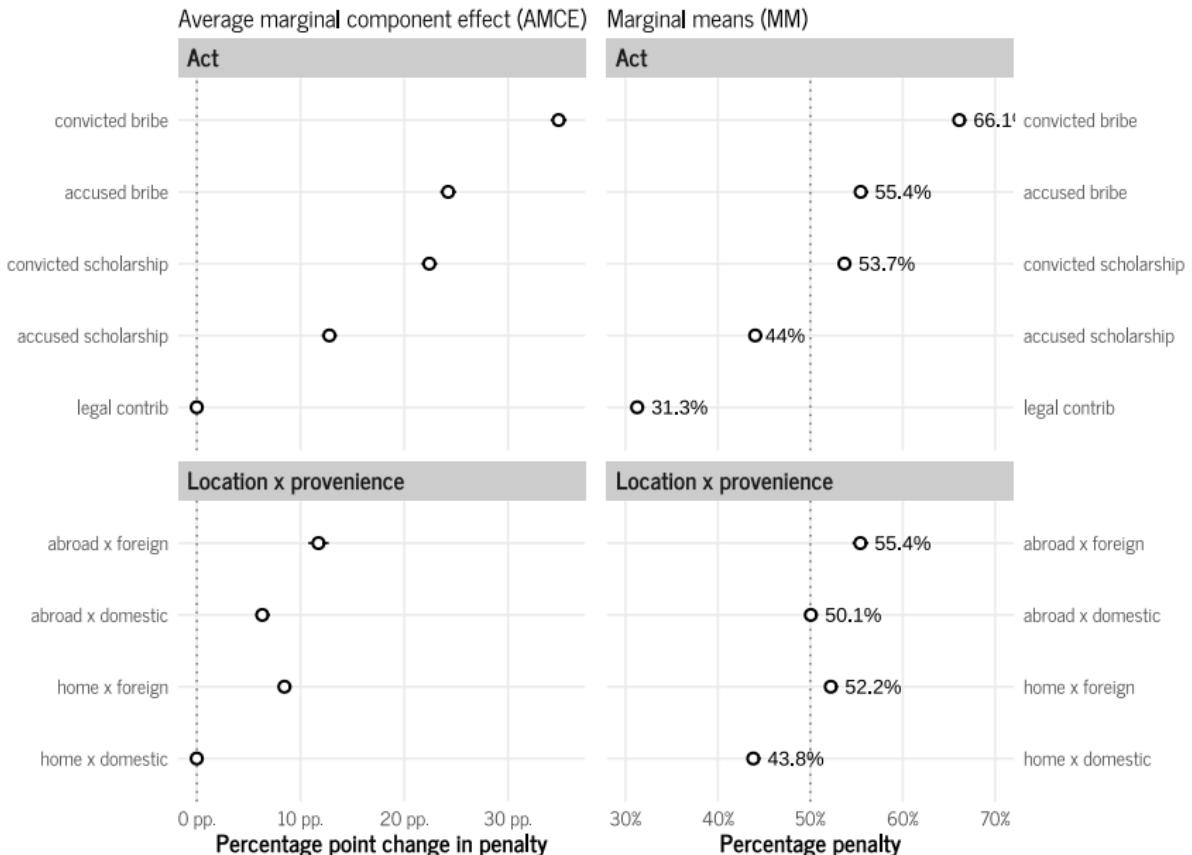

Question	Scenario
Which of the two companies would you like to open a new subsidiary in your area?	A or B
Which of the two companies' products would you rather consume or use?	A or B
Which of the two companies' products would you boycott?	A or B
Which of the two companies' CEO should resign?	A or B
At which of the two companies would you rather work?	A or B
In which of the two companies would you rather invest?	A or B

Negative outcomes, punishment, or harsh reactions:

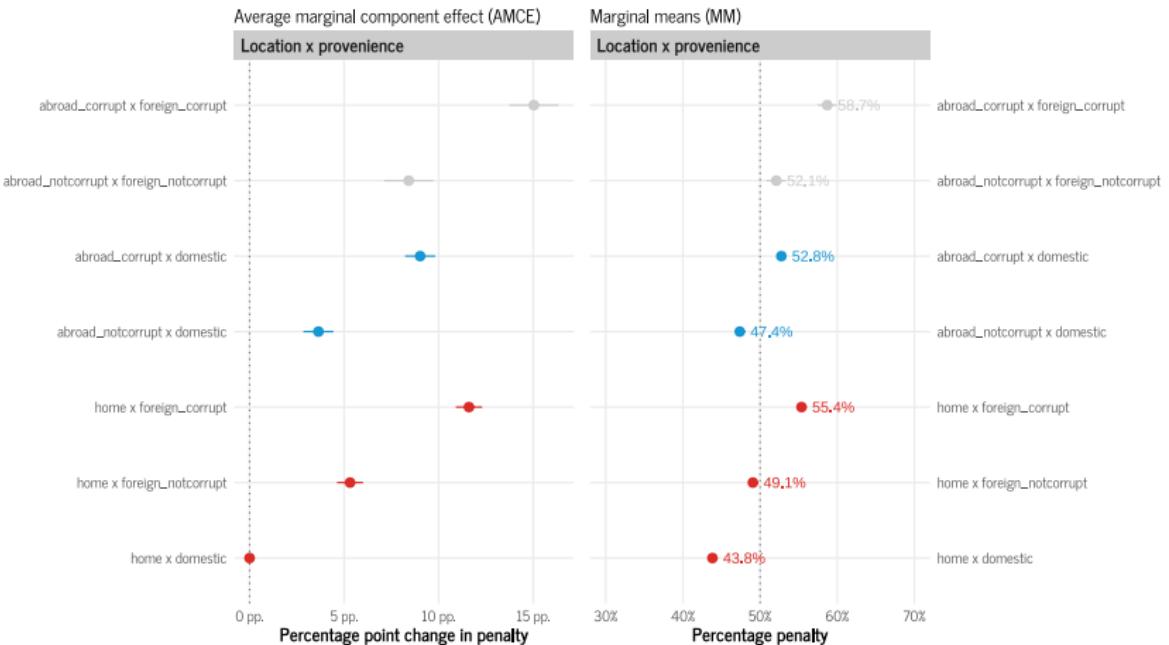

- ▶ Does not select the scenario for: having a new subsidiary in her area; would rather consume/use products from; would rather work at; and would rather invest in
- ▶ Selects the scenario for: boycott products; and CEO should resign

Implications

1. Citizens are not passive observers but active agents of corporate accountability
 - ▶ Consistent cross-country evidence [show results](#) | [show context results](#)
 - ▶ For multiple sanctioning behaviors [show results](#) | [show context results](#)
2. For multinational firms, corruption is not only a legal hazard but also a reputational liability
 - ▶ Foreign subsidiaries face steeper reputational costs than domestic peers
 - ▶ Firms cannot get away with corruption by adapting to local norms, rejecting the “when in Rome” logic
3. For policymakers, the results highlight how bottom-up market sanctions complement formal enforcement

Thank you for your attention!

Appendix: Individual moderator

Now, we will show you a list of processes and we would like to know whether they are very good, somewhat good, neutral, somewhat bad, or very bad for your own or your family's well-being. Please pick one of the possible answers for each process.

	Very good	Somewhat good	Neutral	Somewhat bad	Very bad
Growing business ties between [survey country] and other countries	<input type="checkbox"/>				
Faster communication and greater travel between the people of [survey country] and people in other countries	<input type="checkbox"/>				
Different products that are now available from different parts of the world	<input type="checkbox"/>				
The world becoming more connected through greater economic trade and faster communications	<input type="checkbox"/>				
Globalization	<input type="checkbox"/>				

Appendix: Individual moderator

Now, we will ask you about some actors and their influence on how things are going in [survey country]. Please pick one of the possible answers for each actor.

	Very good in- fluence	Somewhat good in- fluence	Neutral influ- ence	Somewhat bad in- fluence	Very bad in- fluence
Large companies from other countries	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
International organizations such as the World Bank, International Monetary Fund and World Trade Organization (WTO)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Anti-globalization protesters	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
